

## Potential candidates for Rucio Documentation:

- Docsy (theme) running on Hugo - <https://opensource.googleblog.com/2019/07/announcing-docsy-website-theme-for.html>
  1. Theme and source files hosted on Github
  2. Doesn't actually generate your site's HTML files, done by Hugo
  3. Source files can be Markdown/HTML
  4. Suitable for medium - large documentation & for different types of documentation i.e. reference docs, tutorials etc.
  5. <https://www.docsy.dev/docs/> -- Documentation for docsy
  6. Open source
  7. Translations supported
  8. MDX support, need to verify
- Docusaurus - <https://docusaurus.io/>
  1. Open source
  2. Powered by Markdown, built using React
  3. <https://docusaurus.io/docs/en/tutorial-setup> -- Sample for how to set it up
  4. Translations & versioning supported (latest version doesn't support multiple languages)
  5. Can be integrated with gh-pages
- Mkdocs - <https://www.mkdocs.org/>
- Gitbooks - <https://docs.gitbook.com/resources/use-cases/product-docs-new>

## A few questions:

- Are we looking at supporting multiple languages or just English?
  - If we're, how many?
- Would we be open to using multiple documentation-as-a-service tools or just one for ALL the documentation we have?
  - E.g. SLATE for API documentation, Docusaurus for hosting the website etc.
-
